NEW TECHNOLOGIES
ENERGETIC MEASURES OF THE BODY

1. HEART RATE VARIABILITY
2. VEGETATIVE AND STRESS MEASURES
3. PSYCHOSOMATIC AND BRAIN BALANCE
4. IMMUNE BALANCE
5. BIOLOGICAL AGE AND ENERGY PYRAMID
6. GASTROINTESTINAL BALANCE
7. BALANCE OF OTHER ORGANS AND SYSTEMS
8. Spine and Joints
9. Functional Health
10. Aura Balance
11. Chakra Balance
12. Meridian Balance
13. Condition of Organs according to U-SIN
14. Energy Balance
15. General Indicators of Balancing Energy Systems
More than 15 Energy Indicators, including organ systems, psychosomastics, meridians and chakras

Recommendations for using program sets on the DEVITA AP and RITM, as well as guidelines for using the new DELIXIR supplements
HEART RATE INDICATOR

Dynamic Physiological Indicators during Examination

Validity: High

Adaptation: 69%
Vegetative Balance: 73%
Biochemical Balance: 50%
Psychosomatic Condition: 30%
Total Health Indicator: 45%

Comments:
NEUROVEGETATIVE FUNCTION INDICATORS

STRESS INDICATOR

Normal Values
- Acute Stress
- Lowered Adaptation
- Chronic Stress
- No adaptation

NEUROVEGETATIVE BALANCE

Excellent Neurovegetative Balance
- Unstable Neurovegetative Balance
- Reduced Neurovegetative Balance
- Normal Neurovegetative Balance
- Dysfunctional Neurovegetative Balance

General Indicator
- CNS
- ANS
**PSYCHOSOMATIC CONDITION**

**ELECTRICAL ACTIVITY**

*67%*

**BRAIN WAVE ACTIVITY FOR DIFFERENT STAGES**

- **Delta**
  - 0..4 Hz
  - 5%

- **Theta**
  - 4..8 Hz
  - 61%

- **Alpha**
  - 8..13 Hz
  - 17%

- **Beta**
  - 13..19 Hz
  - 6%

- **Gamma**
  - 19..25 Hz
  - 10%

**GAMMA**: high level of perception, excellent concentration levels

**BETA**: active waking of consciousness, intense Spiritual development

**ALPHA**: development of consciousness, relaxed state

**THETA**: the hour of falling asleep, sleep and dream state

**DELTA**: sleep without dreams, unconscious, coma state

**Balanced State**: 83-100%

**Stable Condition**: 66-83%

**Normal Condition**: 50-66%

**Fatigue**: 33-50%

**Nervous Tension**: 17-33%

**High Levels of Stress**: 0-17%
Immune System Status

The ability of the body to defend against foreign invaders, maintaining homeostasis on a cellular and molecular level.

- 83-100% High level of immunity
- 66-83% Good level of immunity
- 50-60% Normal level of immunity
- 33-50% Weakened immunity
- 17-33% Very weakened immunity
- 0-17% Exhausted immunity
STATUS OF BIOLOGICAL AGING

Age of patient 44

Biological Age 32

Biological Age is less than the Chronological Age

Optimal Energy Balance

Energy Stored 229

Energy Expenditure 271

Low Energy Balance

High Energy Balance

Very Low Energy Balance

Normal Energy Balance

Dysfunctional Energy Balance

Energy Pyramids

Optimal Energy Balance

Low Energy Balance

High Energy Balance

Very Low Energy Balance

Normal Energy Balance

Dysfunctional Energy Balance
The Gastrointestinal Tract is designed for digesting the food that we eat in order to provide energy to all the other organ systems. This is why it is a critical system at the heart of all the other systems of the body.

The GI tract includes: the mouth, teeth, oesophagus, the stomach, small and large intestines, leading to the anus. In addition, the pancreas that secretes enzymes that help to break down the food. The gallbladder also produces bile to help emulsify fats.

- Stomach
- Liver
- Spleen
- Gall bladder
- Pancreas
- Colon
- Small intestine
- Gall bladder
- Pancreas
- Colon
- Small intestine

Good functioning of the organs
Stressed organs
Disease risk – the organs are dysfunctional
The Human Body is a complex, self-regulating biological system that is constantly maintaining balance with its external environment. The vitality of the body is determined by the synergistic functioning of all the physiological systems of the body.

The human body is comprised of the following systems: urinary, circulatory, respiratory, neuromuscular, GI tract, endocrine, reproductive, lymphatic and more.

- **66 – 100%**
  Good functionality

- **34 – 65%**
  Stressed functionality

- **0 - 33%**
  Disease risk. Functionality is severely compromised.
FUNCTIONALITY OF THE SPINAL COLUMN

THE SPINAL COLUMN

- **Cervical Vertebrae (Total - 7)**: 95%
- **Thoracic Vertebrae (Total - 12)**: 75%
- **Lumbar Vertebrae (Total - 5)**: 52%
- **Sacrum**: 31%
- **Coccyx**: 10%

SECTIONS OF THE SPINAL COLUMN

- Spinal column is in excellent condition – with free flow of energy.
- Spinal column in good condition – slight deficiency in energy flow.
- Spinal column in moderate health – there is a definable deficiency in energy flow.
- Spinal column in poor condition – there is a big deficiency in energy flow.
- Spinal column in very poor health – with blocked energy flow.
This is not a comprehensive medical exam, but an energetic analysis of body function. It should under no circumstances be substituted for medical examinations by a qualified doctor when required.
The aura is the bioenergy emanated by the human and is composed of various layers. A disturbance of this energy field that may also be caused by external informational pollution can lead to imbalances and diseases. A bright, luminescent aura indicates harmony and balance, whereas a darker aura reflects a physiological, psychological and emotional imbalance and deficiency. The size of the aura perimeter also plays a role – the larger the aura, the more pronounced if the energy flow and the person will be better protected and healthy. There is also a direct relationship between the aura and the chakras.

High energy levels – good adaptation reserves

Reduced energy levels and lower adaptation reserves

Energy exhaustion – very low adaptation reserves
The Chakras are Energy Centres where humans obtain energy from the environment. They are found along the spinal column. Depending on how open these Chakras are, this will determine the overall health of the person.

**SAKHASRARA**: the Spiritual and Consciousness Chakra
- Organs: brain, pituitary and pineal gland
- Responsible for psychological health and inner harmony of the person

**ADZNA**: the Chakra of gentleness and high achievement
- Organs: neurovegetative system, eyes, nose, vertebral column
- Responsible for the nervous system

**VISHUDHA**: the Harmony Chakra
- Organs: larynx, thyroid, vocal chords, upper lungs
- Responsible for the respiratory system and larynx

**ANAHATA**: the Chakra of Love
- Organs: heart, lungs, circulation
- Responsible for the circulatory system

**MANIPURA**: the Chakra of Wealth
- Organs: stomach, pancreas, bladder, liver
- Responsible for the digestive system

**SVADHISTANA**: the Chakra of Desire
- Organs: urinary system, omentum, appendix
- Responsible for controlling Metabolism

**MULADHARA**: the Chakra of Energy
- Organs: colon, bladder, prostate, uterus, lower limbs
- Responsible for Energy, Vitality and Metabolism

**CHAKRA ENERGY MAPS**

- 88% (3 stars)
- 100% (4 stars)
- 71% (2 stars)
- 97% (4 stars)
- 89% (3 stars)
- 100% (4 stars)
- 56% (2 stars)
THE MERIDIANS

ENERGY DISTRIBUTION

Open Energy Flow
- Lung Meridian
- Colon Meridian
- Stomach Meridian
- Spleen and Pancreas Meridian
- Heart Meridian
- Small Intestine Meridian
- Gall Bladder Meridian
- Liver Meridian

Reduced Energy Flow
- Bladder Meridian
- Kidney Meridian
- Brain Meridian
- Spinal Cord Meridian
- Gall Bladder Meridian
- Liver Meridian

Energy Flow Dysfunctional
- Liver Meridian
- Gall Bladder Meridian
- Spinal Cord Meridian
- Heart Meridian
- Spleen and Pancreas Meridian
- Stomach Meridian
- Colon Meridian
- Bladder Meridian
THE U-SIN SYSTEM

OPTIMAL ENERGY IN MERIDIAN SYSTEMS

YIN – the passive energy pole (inner circle).
YANG – the active energy pole (outer circle).

YANG TYPES: dissipates energy to the external environment
YIN TYPES: collects energy

Depending on the time of the day, YIN and YANG values can change. During the day, YANG energy is dominant, peaking at lunch time. YIN energy is more dominant at night, peaking around midnight.

During a new moon, the female energy YIN is dominant, but during a full moon the YANG male energy is dominant. During a full moon people are usually more active and it is good to keep busy during this period. For creativity and achieving, it is best to wait until the new moon.

The seasons can also effect our YIN and YANG energies. In Fall and Winter, the YIN is effected more, whereas YANG is more effected during Spring and Summer. Children that are however born in Winter or Fall will have dominant YANG, whereas children born in Spring and Summer will have more dominant YIN.

- **TREE** (Green): Anger, rage, eyes, bile, joints, bitter taste
- **EARTH** (Yellow): reflectiing, lips, muscles, lymph, sweet taste
- **FIRE** (Red): Intense emotions, (happiness, anxiety), tongue, arteries, blood, bitter taste
- **WATER** (Black): Fear, ears, bones, urine, unsalted taste
- **METAL** (White): Sadness, nose, skin, dampness, spicy taste
The measures in this test are not comprehensive and cannot be substituted for medical tests by a medical practitioner. This test can be considered an additional measure of the ENERGETIC balance of the body and its energy systems.
